INCIDENT REPORT — INC-2026-0041

1. Incident Details

Incident ID	INC-2026-0041
Title	Organization-Wide Internet Connectivity Outage
Severity	HIGH
Status	RESOLVED
Date	29 June 2026
Outage Duration	10:17 – 15:42 hrs EAT (5 hours 25 minutes)
Reported By	ICT Department, AWWDA
Incident Manager	ICT Manager, AWWDA

2. Impact Summary

- All 150 staff unable to access the internet, external email, cloud services, and external websites for 5 hours 25 minutes.
- Internal LAN, file sharing, and local services remained fully operational throughout.
- No data loss recorded.

3. Incident Timeline

Time (EAT)	Event
10:17	Staff report 'No Internet Access' on wired and Wi-Fi connections. ICT Department alerted.
10:25	ICT confirms organization-wide outage. Internal network verified operational.
10:45	ISP contacted; support ticket raised.
11:10	ISP confirms active fault in the area; investigation underway.
12:00	Staff notified; advised to use mobile data for urgent external communication.
13:15	ISP field team confirms root cause: underground fiber-optic trunk line severed by road construction crew. Repair commenced.
15:35	ISP confirms line repaired. ICT restarts gateway switch and firewall.
15:42	Full internet connectivity restored. Staff notified. Incident resolved.

4. Root Cause & Resolution

Root Cause:

A road construction crew working near AWWDA premises accidentally severed the ISP's primary underground fiber-optic trunk line. This was an external, third-party incident outside AWWDA's control. AWWDA's internal infrastructure was fully functional throughout.

Resolution:

- ISP fault reported and ticket raised immediately upon confirmation of external fault.
- Internal diagnostics performed to rule out AWWDA-side infrastructure issues.
- Staff notified and directed to use mobile data for urgent tasks during the outage.
- Upon ISP confirmation of fiber repair, gateway switch and firewall restarted at 15:35 hrs.
- Connectivity confirmed fully restored at 15:42 hrs. Post-resolution monitoring confirmed stability.

5. Recommendations

Recommendation	Priority	Target
Procure a secondary/backup ISP connection for failover during primary line failures.	HIGH	Q3 2026
Procure a 4G/LTE mobile hotspot for emergency connectivity during outages.	MEDIUM	Q3 2026
Document a formal Internet Outage Response Procedure (checklist, comms templates, escalation path).	MEDIUM	July 2026
Establish direct ISP escalation contacts for faster fault resolution.	MEDIUM	July 2026
